Hiring Manager
Capgemini
Bengaluru, India
,

Dear Hiring Manager,

I am enthusiastic in applying to the position of Data Engineer, associated with Capgemini. I am a final-year B.Tech student at M S Ramaiah University of Applied Sciences, majoring in Mathematics and Computing, wherein a firm foundation regarding data engineering principles, cloud computing, and advanced data analytics has been built. I would consider this a great opportunity to implement my skills and experiences for the betterment of your team in devising innovative data solutions.

Some of the technical skills I have are Python, SQL, and the whole stack of data processing. While working on substantial projects such as building up an autonomous drone navigation system or deploying a price prediction model based on SARIMA, I had to develop and roll out complex data pipelines, deeply analyze data, derive actionable insights from it—a skill that is immensely important to be successful in the Data Engineering discipline.

Capgemini uses the latest technologies and develops data-driven solutions to drive businesses; this aligns perfectly with my career goals. In particular, I am attracted to work in such a dynamic environment that allows me to build scalable data architectures and optimize data processes.

I am confident that my quantitative background, along with hands-on experience in data engineering, has equipped me with the ability to make a valuable contribution to your team. I am excited to talk through my background and experience and how they might align with Capgemini's needs. Thank you for considering my application.

Kind Regards,

Pranav Venkatesh
